Business model and projects

Save Patients All Over the world

- *Eliminate Overlooked Cancer through Endoscopic AI* -

- Endoscopic AI is a diagnostic support system that discovers neoplastic lesions within endoscopic imagery
- Relatively easy to implement, with low implementation hurdles for patients, doctors, and institutions
- In testing, the performance of our lesion classification AI has bested non-expert endoscopists and equaled that of expert endoscopists
- This classification product is now under regulatory review. When approved, it will be the world's first endoscopic AI specialized in gastric cancer.
