PENTAX Medical Triple Aim

PENTAX Medical INSPIRA™ video processor is designed to boost diagnostic and therapeutic capabilities by providing optimum image quality for all PENTAX Medical endoscopes¹⁾. It paves the way for innovative technologies to improve clinical outcomes.

PENTAX Medical INSPIRA™ video processor combines cutting-edge functionalities in one plug-and-play solution with intuitive usability. The customizable graphical user interface helps to focus on what is really important: the patient.

PENTAX Medical INSPIRA™ video processor upgrades your legacy endoscope portfolio²⁾ to the latest imaging standards, extending the life cycle of each endoscope for greater sustainability. The system provides a future-proof platform for next generation medical solutions.

1) 90i, i10, J10, 90K, i10c and i20c series endoscopes

2) 90i, i10, J10, 90K and i10c series endoscopes Not all models are compatible. For details, contact your local PENTAX Medical service facility.

INSPIRA helps you improve sustainability

PENTAX Medical aims to continuously improve the level of sustainability. The INSPIRA video processor allows you to continue using the endoscopes of today while upgrading their visualization performance. All this helps to improve sustainability by

- reducing waste volume,
- saving material resources,
- and avoiding energy consumption.

MEDICAL

SEE THE FUTURE
OF GREAT VISION
AND HANDLING

**PENTAX Medical i20c
Video Endoscope Series**
Supporting procedures with
superior vision and ergonomics.

i20c Video Endoscope Series

The next generation of endoscopes

Lightweight global connector, one-handed operation, sealed for easy reprocessing

Stunning clarity and visibility with highly detailed images

Adjustable stiffness (colonoscopes only) adds to well proven TrueTorque™ and i-FLEX™ technology

Outstanding maneuverability and accessibility due to 210° tip angulation (up) also in i20c colonoscopes

Easier control during procedures due to new ergonomic control body, steering wheels and valves

Inspired by
#PENTAXMedicalTripleAim

The next generation of endoscopes

Lightweight global connector, one-handed operation, sealed for easy reprocessing

The global connector design was optimized for fast, one-handed and fail-safe operation.

Characteristic plug shape for fail-safe connection

Sealed connector for an efficient reprocessing with no need for soaking caps

Release button enables single-handed operation and unplugging

Weight and size reduced connector for an easier overall handling

The next generation of endoscopes

Colonoscopes with further improved insertion tube: **i-FLEX™, TrueTorque™** enhanced by adjustable stiffness

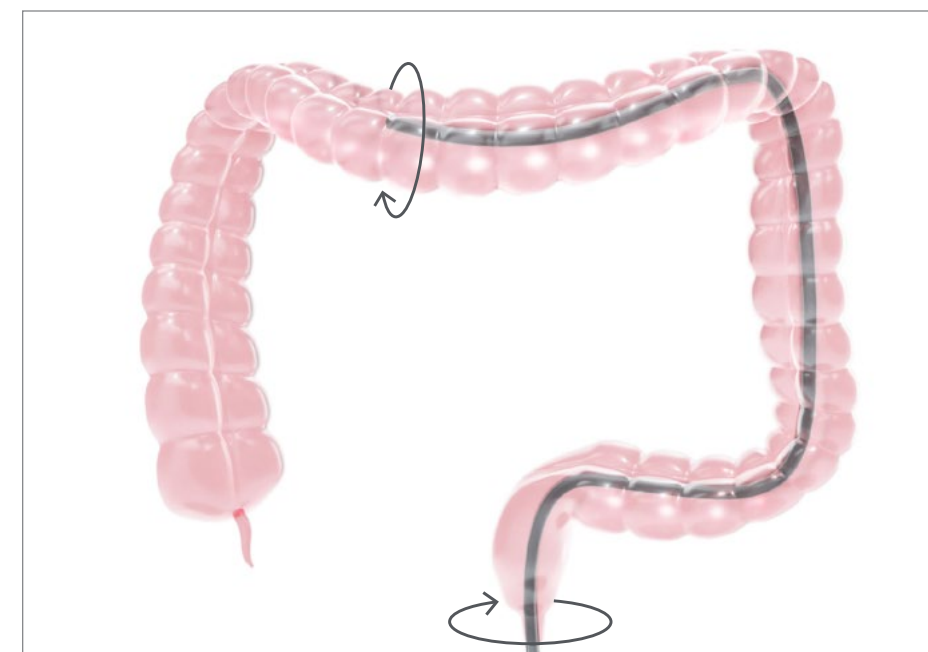

The i20c colonoscopes support efficient endoscope advancement, designed to reduce loopings, provide direct torque and an overall improved maneuverability.

i-FLEX™

Graded endoscope flexibility to ease the maneuverability and help to reduce loopings

TrueTorque™

Delivers a higher tactile feel with the endoscopes, supporting a predictable movement

Adjustable stiffness

Rigidity of the insertion tube can be adjusted for individual patient's anatomy

Learn more about i-FLEX™ and TrueTorque™

Ergonomic control body: improved steering wheels, remote buttons and valves

Steering wheels for tip angulation reduced in size and lowered for easy access

Control body size optimized for all hand dimensions aiming for stressless usage

Improved air/water and suction valves for smooth operation

Optimized remote button positioning and activation for easier access and operations

The next generation of endoscopes

Steering wheels for tip angulation reduced in size and lowered for easy access

Finger-optimized spokes require less force to move the distal end

Lower R/L wheel with wider diameter for easier access

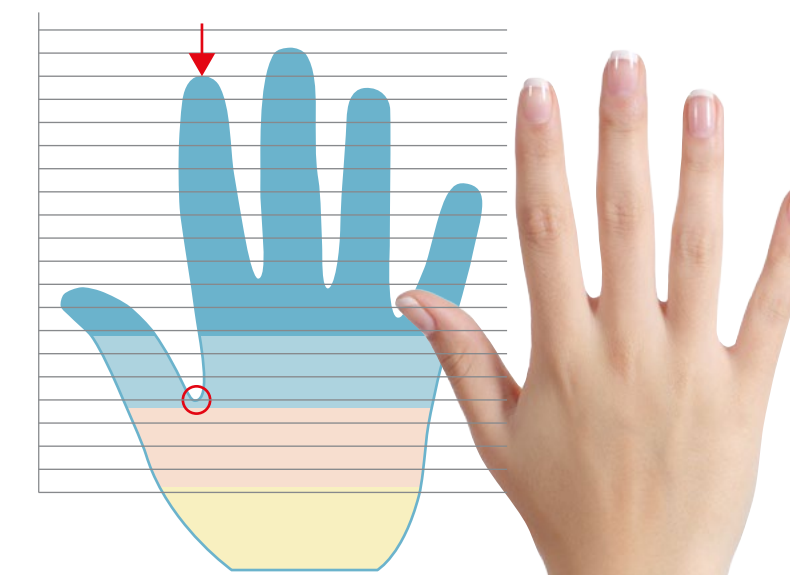

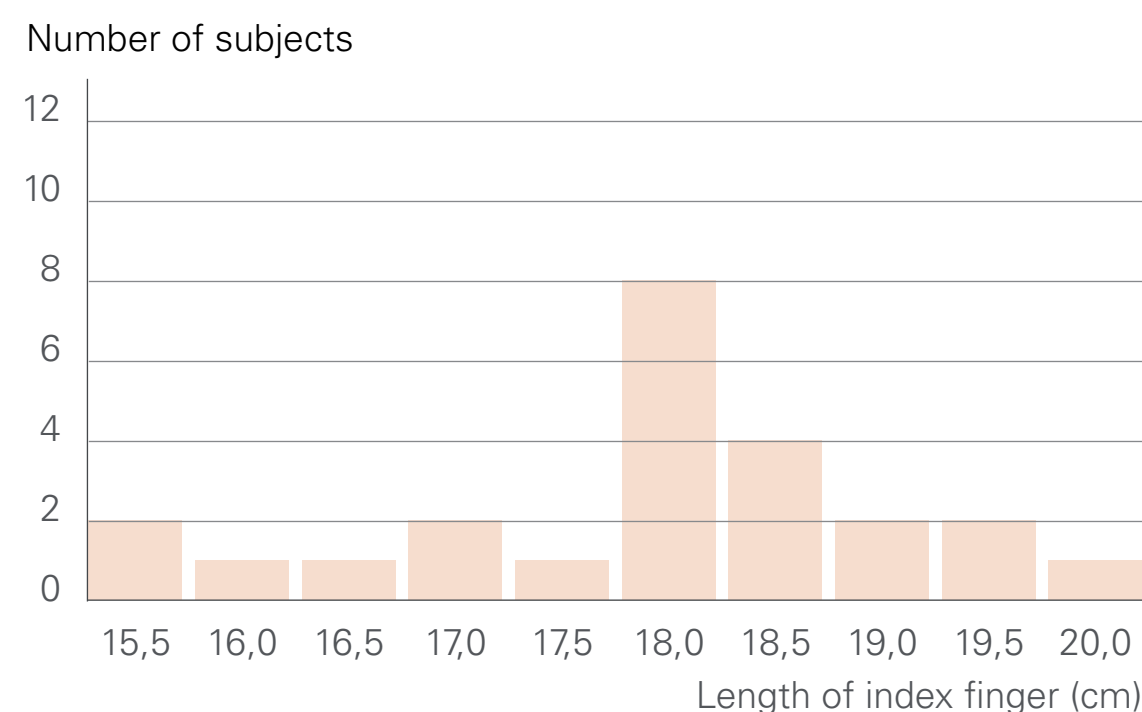

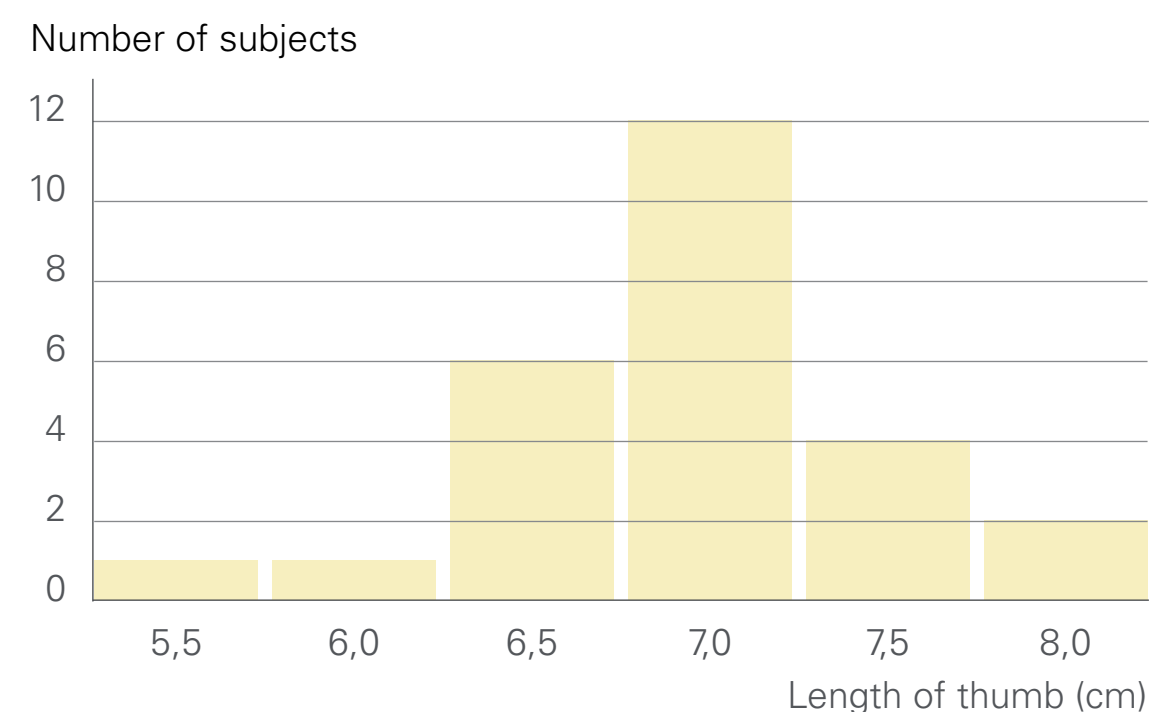

Flatter U/D wheel shape for improved access and operability

The next generation of endoscopes

Control body size optimized for all hand dimensions

In a user focused evaluation¹⁾, the average hand and finger dimensions were measured, to optimize the control body's fit:

Different hand dimensions were studied to improve endoscope ergonomics

The results of this survey led to a redesign of the control body, allowing a most comfortable endoscope usage considering the spectrum of all handsizes, from large to small hands.

¹⁾ Evaluation was conducted 2019 with 42 probands, reflecting potential gender and geographical considerations.

The next generation of endoscopes

Optimized remote button positioning for an efficient triggering

Unique side-triggering

Remote buttons can be triggered also from the side, leading to an ergonomic usage.

Horizontal positioning

Buttons 3 and 4 are located in an optimized horizontal position for an easy access.

The next generation of endoscopes

Outstanding positioning and accessibility due to 210° tip angulation (up) also in i20c colonoscopes

210° tip angulation in colonoscopes to enable detection and resection of even hard to reach lesions.

- **Excellent maneuverability** due to 210° deflection and minimised bending radius.
- **Advanced therapy:** Combining flexibility of the endoscope tip and stability of the endoscope body.
- **Advanced orientation and detection** due to deflection, up to 4K resolution and excellent 5 LED illumination in combination with i-scan.

The next generation of endoscopes

PENTAX Medical Triple Aim

i20c endoscopes aim to support healthcare professionals in detection, diagnosis and therapy better than ever. Physicians can instantly benefit from **uncompromising vision and maneuverability**.

The new, unique control body and **lightweight connector** of the i20c endoscopes are designed to **optimize the workflow**.

The i20c endoscope generation has been designed with **superior ergonomics** for medical professionals who spend countless hours working with it. Its **adjustable stiffness** and the advanced imaging have the potential to **improve the quality of procedures**.

What Experts say about INSPIRA

“The new INSPIRA processor offers superb image quality in terms of contrast, saturation, illumination and also crystal-clear freeze function. And all that with the existing scope setup that we are used to.”

Prof Dr Timo Rath, Professor of Endoscopy and Molecular Imaging,
University of Erlangen, Nuremberg, Germany

References

What Experts say about INSPIRA

“This new processor improves dramatically the quality of the endoscopic image, especially with the 4K screen.”

About White Light Improvement

“In white light, the margins of digestive lesions, in particular colonic polyps and Barrett’s esophagus, are better defined.”

About i-scan OE Improvement

“The use of chromoendoscopy in OE1 mode makes it possible to better appreciate the vascularization of gastro-colic lesions and thus to better define the possibilities of endoscopic resection.”

About Legacy Image Boost – MagniView

“The INSPIRA and gastroscope zoom connection allows an almost microscopic approach to the digestive wall. In conclusion, the INSPIRA processor qualitatively increases the performance of PENTAX Medical J10 series endoscopes.”

Dr Marc Giovannini, Chief of the Dept of Medico-surgical Digestive Oncology,
Institut Paoli-Calmettes, France.
